

Integrate QVscribe into Your Workflow

One third of all software on work computers is unused, resulting in a **\$30 billion waste in the US** and a **£5.7 billion waste in the UK**.

Not every software is the right fit for every workplace, however companies lose out on potential ROI when they make no attempt at workflow integration when acquiring new software.

QVscribe already provides numerous out of the box features that assist with workflow integration including:

Seamless Integration with Existing Toolchain

Optimized User Experience

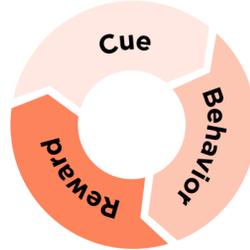

Continual Feedback

Additionally, QVscribe can be deployed mindfully to strengthen workflow integration through ROI enhancing habit formation.

Habit Formation is a Three Step cycle

Popularized in Charles Duhigg's book "The Power of Habit", the habit loop is a common set of behaviors and stimuli that explain habit formulation and longevity.

Cue

A prompt, or environmental stimuli that allow your brain to predict reward.

Behavior

The actions the brain recognizes as leading to a reward, or desired outcome.

Reward

The reward ensures your brain remembers that the cue is important and links the cue with the habitual behavior.

Habit Formation & the Authoring Process

When authoring new requirements, QVscribe should be consulted early and often. Catch mistakes early in the authoring process and cut down on review time.

Cue

Ensure QVscribe is always on and always visible in your authoring tool of choice. Visibility is critical.

Behavior

Requirements need not be read like a novel from start to finish. Sort your requirements with QVscribe so that the lowest scoring requirement are listed first. Create a process where requirements must attain a minimum score prior to the review meeting.

Reward

QRA pioneered the technique of scoring requirements on a scale of 1 to 5. Fixing the lowest scoring requirement first gives the immediate response of seeing those red boxes turn green.

Not every software is the right fit for every workplace, however companies lose out on potential ROI when they make no attempt at workflow integration when acquiring new software.

66 days

A study published in the European Journal of Social psychology found that habit formation takes an average of **66 days**. Begin integrating QVscribe into your workflow today for long-term efficiency.
